

## ABSTRACT OF THE DISCLOSURE

An enclosure having a tear away portion thereon representing a coupon, promotion, prize or other advertisement and a method for making the same is provided. The cover includes a first layer, a second layer and a removable piece. The first layer is adapted to protectively shield and retain the product within the interior portion of the container. The second layer is adapted to overlay the first layer and further includes a weakened portion. The removable piece is adapted to be integrated with the second layer and may be separated from the second layer by breaking weakened scored portion and tearing away the removable piece from the second layer while leaving the first layer to retain the contents within the interior portion of the container. The removable piece may be used as a premium, coupon, prize or other type of advertisement.
